

What is an AI chatbot?

Why might some people use AI chatbots?

What might someone need to be aware of, if communicating with a chatbot?

Can you explain any similarities and differences between communicating with a human friend and an AI chatbot?

Knows me well

Offers good advice

**Trustworthy and
doesn't share my
private stories**

Fun

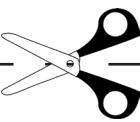

Good listener

**Good to have a
meaningful/personal
conversation with**

**Would not knowingly
cause me harm**

**Shares some similar
hobbies/interests**

**Sometimes disagrees
with me**

Complete this note for Billy, explaining some important things to consider, if he is interacting with an AI chatbot.

Use your own ideas or choose from the suggestions below.

Dear Billy,

If you do interact with an AI chatbot, two important things to remember are:

1. _____

2. _____

I hope this helps!

From,

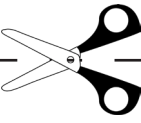

A chatbot is not human – it doesn't have feelings and can't understand what you are saying.

AI chatbots can make mistakes.

Personal information should not be shared with an AI chatbot as it can be stored and used without your permission.

AI chatbots are designed to keep you using them – for example, by asking questions or mimicking human interactions.

**Chatbots
only**

Both

**Human
friends only**

Knows me well

Always offers good advice

Trustworthy and doesn't share private stories

Fun

Good to have a meaningful/personal conversation with

Remembers what I say

Would not knowingly cause me harm

Shares some similar hobbies/interests

Sometimes disagrees with me

Can understand feelings

Always available
